### **DETAILED ACTION**

#### Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention: Embodiments 1 and 2 of determining the second cardiac event as a mechanical event or an electrical event, respectively.

Embodiments 3, 4, and 5 of optimizing the AVD for contractility, stroke volume, or contractility and stroke volume, respectively.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, there are no claims that are allowable and generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the

examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

During a telephone conversation with Timothy Bianchi on May 24, 2004 a provisional election was made without traverse to prosecute the invention of embodiments 1 and 3, claims 1-10 and 22-28. Affirmation of this election must be made by applicant in replying to this Office action. Claims 11-21 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

## Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Salo et al (5334222). Salo states in column 5 that the electromechanical interval, EMI, is measured from the atrial electrical event to the end of rapid filling, D, for determining the AV interval (column 2 and 7) for contractility (column 3, lines 1-15, peak rate of change of pressure with respect to time) providing the claimed sensing of the P electrical event, determining a second mechanical

Art Unit: 3762

event, and determining a first time interval for delivering a pacing pulse referenced to the first cardiac event for an AVD optimizing contractility.

## **Double Patenting**

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-10, or 1-10, or 1 and 22-28, or 1 and 2, or 1-10 are rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-17 or 1-18, or 1-11, or 1-28, or 1-27 of U.S. Patent No. 6684103 or 6542775, or 6351673, or 6360127, or 6144880, respectively. Although the conflicting claims are not identical, they are not patentably distinct from each other because the patented claims are narrower and meet the limitations of the broader application claims. In addition, to include the use of wall motion or an accelerometer to measure the mechanical event would be obvious to one having ordinary skill in the art at the time the invention was made since it was known to measure mechanical ventricular events using wall motion or an accelerometer to provide a conventional, well tested means to easily measure mechanical ventricular events. In addition, it would have been obvious to one having ordinary skill in the art to perform the method in view of the apparatus (for patent number 6542775), since the method steps are set forth in the structure of the apparatus and since the

Page 5

Art Unit: 3762

apparatus is used to perform the method. Also, it would have been obvious to one having

ordinary skill in the art to deliver a pacing pulse using the determined AVD (for patent number

6351673) from an interval since it was known in the art that delivering pacing pulses to the

patient for a determined AVD from an interval provides an effective pacing therapy to the patient

that optimizes stroke volume, contractility, or both.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to George R Evanisko whose telephone number is 703 308-2612.

The examiner can normally be reached on M-F 6:30-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Angela Sykes can be reached on 703 308-5181. The fax phone number for the

organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
